

Pennsylvania Convention Center TECHNOLOGY

From Internet services, to the latest High Definition video technology and Virtual Attendance, the Pennsylvania Convention Center offers a wide range of technology services.

AUDIO /VISUAL SERVICES

PRESENTATION AND PRODUCTION

We brought AV Services in-house to deliver professional presentation and production to our clients at a fraction of the cost. We also work closely with AV contractors for more grand scale productions. PCCA offers rental of AV equipment to address all facets of your event needs. Our AV Services are guaranteed to save you money and deliver the best meetings, general sessions, and breakouts.

SESSION RECORDINGS

We can digitally record your sessions and deliver them to you as raw footage or with full post-production complete. These recordings can be a source of revenue or a historical record of your event.

AUDIENCE RESPONSE

Our world-class polling presentation system allows meeting attendees to respond to questions by pressing the appropriate key on individual keypads. Results are automatically integrated into the presentation.

VIDEO DISTRIBUTION

With our Cisco Video Distribution Network we can capture and distribute up to HD quality audio and video from any live or recorded content from any location. This is great for meeting overflow, general session, broadcast, and streaming of HD content of national events.

NETWORKING AND INTERNET

HIGH SPEED INTERNET

We provide High Speed Wired Internet Services throughout our facility. We can connect your show network anywhere, anytime for Internet and e-mail access or your own private data network.

NETWORK / SHOWNET

Utilize our Fiber-Optic Backbone which reaches the entire 1.3 Million square foot venue to set up your Point to Point network, VLAN or PC network. Use your VPN software to create a secure connection to your corporate network.

WIRELESS INTERNET

The Pennsylvania Convention Center WiFi service is available throughout all concourse areas, Grand Hall, Ballrooms and meeting rooms in the facility. The WiFi service is designed specifically for your event attendees. We provide free WiFi access in designated areas and paid \ sponsored services in all other areas.

PHONE/DATA SERVICE

We offer a full spectrum of technology for telephone lines, voice, fax, modem, credit card or data lines that serve all telecom needs for event managers, exhibitors and speakers.

VIRTUAL ATTENDANCE

Virtual Attendance allows you to increase attendance and revenue numbers by expanding your show to individuals who otherwise could not attend. VA also allows you to improve the experience of onsite attendees by allowing them to review sessions they attended or view sessions they could not attend due to time conflicts.

WEBCASTING

Webcasting is the simplest form of VA. It allows remote attendees to hear the presenter and see the presentation. We can provide you with the audio, presentation capture and hosting of the webcast.

SESSIONS ON DEMAND

Session on Demand combines Video Webcast with Session Recording. By hosting the recorded session only we can give both your remote and onsite attendees the ultimate in flexibility.

VIDEO WEBCAST

Video Webcast is similar to webcasting but the remote attendees also see the presenter.

SPONSORSHIP & ADVERTISING

Sponsorship & Advertising Opportunities are available on our digital signage and wireless access pages.

DIGITAL SIGNAGE

Maximize your exposure by displaying your company's products or services throughout the Convention Center during your event.

WIRELESS SPONSORSHIP

With sponsorship of Free Wireless for your attendees, the sponsor will receive a free splash page informing attendees of their sponsorship.
